

Manufactured Home PTCS Duct-Sealing Program Procedures & Participating Installers Rebate: \$350 - \$500

- 1) Customer obtains the *PTCS Duct-Sealing Program Procedures & Participating Installers* form (*this form*) from our website: www.clallampud.net/conservation, Participating Installer (see list below) or the PUD's Conservation Dept. (360.565.3249) – **OR** -- responds to a Participating Installer's direct-marketing effort.
- 2) Customer contacts Installer(s) from the *Participating Installer List (below)* specific to the weatherization measure wanted) to obtain bids. As bids may vary *widely*, we suggest obtaining *several* bids. If the customer is to incur a cost for the job, the full cost must be disclosed to the customer **prior to** installation of the duct-sealing measures. Failure to do so may result in denial of the Installer's rebate claim and removal from the Installer list. Bids must clearly show the total cost of the duct sealing job, the PUD rebate amount (deducted from the cost of labor and materials), and the Customer's out of pocket cost, if any.
- 3) The Customer selects and signs the bid they want and schedules a duct-sealing appointment with the selected Participating Installer. Note: the Installer will need access to your home's ductwork and interior heating registers.
- 4) During the installation, the Installer fills out a copy of the PUD's *PTCS Manufactured Home Duct Sealing Program* form; the homeowner signs this form as well as a *PTCS Duct Sealing Certificate & NW Duct-Sealing* form. The Installer keeps a copy of the *Duct Sealing Certificate* for their records.

After Installation:

- 1) The Installer provides the owner with job survey card and a copy of the *PTCSTM Duct Sealing Certificate & NW Duct Sealing Form* or similar form certifying that the ductwork has been sealed by a PTCS technician.
- 2) The Installer will provide the PUD with PTCS forms for the job as well as an invoice for the rebate amount.
- 3) The PUD will provide project quality assurance by visually inspecting 50% of all manufactured home duct-sealing jobs and performing duct leakage testing on 10% of Installer's completed jobs. These PUD quality assurance verifications will be scheduled within fifteen (15) days of receipt of job invoicing and documentation. Please note: all required procedures and paperwork must be completed before the PUD will release the rebate funds.
- 4) Note: the BPA reserves the right to audit the PUD's weatherization programs. You may receive a call from a BPA appointed representative wanting to inspect the PUD incentive work at your home. If the proposed audit time is inconvenient for you, you may request another time or decline.

Please Note:

- New construction homes are ineligible for this rebate.
- Post-installation requests are not eligible for the rebate.
- Rebates may be modified or discontinued at any time.

Appliance Rebates:

Current official ENERGY STAR® certification is required -- *except as noted*. Rebate forms are available at local participating stores, PUD offices and www.clallampud.net/conservation.

\$50 ENERGY STAR® Washer Rebate:

The average home washes almost 400 laundry loads a year using about 13,500 gallons of water. By dramatically reducing energy and water use, ENERGY STAR® washers cut home utility bills by an average of \$50/year, saving 7,000 gallons of water. Over the eleven-year life of a washer, that's enough energy savings to buy a new ENERGY STAR® dishwasher AND enough water saved to provide a lifetime of drinking water for six people.

\$50 ENERGY STAR® Dishwasher Rebate:

Replacing a dishwasher manufactured before 1994 with an ENERGY STAR® qualified dishwasher can save you more than \$30 a year in utility costs. Furthermore, ENERGY STAR® dishwashers use much less water than conventional models.

\$50 ENERGY STAR® Refrigerator Rebate \$25 ENERGY STAR® Freezer Rebate

By using high-efficiency compressors, better insulation, and more precise controls, ENERGY STAR® refrigerators and freezers use about half as much energy as models manufactured before 1993. Replacing a 15+ year old refrigerator or freezer with a new ENERGY STAR® model would save enough energy to light an average household for nearly four months.

\$50 High Efficiency Water Heater* Rebate:

Installing a high efficiency water heater can realize home energy savings of 10%-50%. Actual savings will depend on family size, water usage, heater location and the size and placement of water pipes.

*Storage type of 50 gallons or more. 50–79 gallon H₂O heaters must have an energy factor of 0.93 or higher; 80+ gallon H₂O heaters must have energy factor of 0.91 or higher.

\$20 ENERGY STAR® Compact Fluorescent Light Fixture Rebate: *Note: linear tube fixtures are ineligible.*

This rebate is for hard-wired, ENERGY STAR® Certified compact fluorescent light (CFL) fixtures. ENERGY STAR® qualified CFL fixtures provide bright, warm light, use 75% less energy than standard lighting, produce 75% less heat, and last up to 10 times longer. Replacing your five most frequently used light fixtures with ENERGY STAR® models could save over \$65 per year in energy costs.

\$220 Shower Drainwater Heat Recovery Rebate:

Typically 80–90% of the energy used to heat household water goes down the drain. Drain-water heat recovery systems capture this energy to preheat cold water entering the water heater or going to other water fixtures.

Sources: www.energystar.gov & www.eere.energy.gov
Rebates/incentives may be modified/discontinued at any time.

Weatherization Incentives for Existing Homes:

PUD pre-approval is required; restrictions apply. Post-installation/retroactive incentive requests are *not* eligible. All relevant PUD/BPA requirements must be met. *Program sign-up forms are available at our website, www.clallampud.net/conservation, and the Conservation Dept: 360-565-3249 or 800-542-7859 x249.*

\$300 - \$2,400 High-efficiency Heat Pump Incentive

If you heat with electricity, a heat pump can reduce your heating electricity use by as much as 30%–40%. This is possible because a heat pump moves heat rather than converting it from a fuel. Due to technological advances, the efficiency and performance of today's air-source heat pumps is 150% - 200% greater than those available 30 years ago.

- *Installations must meet Performance Tested Comfort System® (PTCS™) Duct Program specifications & testing procedures.*
- *New construction homes are eligible for this program.*

\$350 - \$750 Duct Sealing Incentive

In a typical house, about 20% of the air in duct systems is lost through leaky, poorly connected ducts. Sealing and insulating ducts increase efficiency, lower your energy bills (up to 20%), and can often pay for itself in energy savings.

- *Jobs must meet Performance Tested Comfort System® (PTCS™) Duct Program specifications & testing procedures*
- *No pre-approval needed for manufactured homes.*

\$0.12/sq. ft. - \$0.90/sq. ft. Insulation Incentives

Inadequate insulation and air leakage are leading causes of home energy waste. You can reduce your home's heating costs through proper insulation and air sealing techniques.

Site built Homes – Ceiling, Wall &/or Floor Insulation:
\$0.12/sq. ft - \$0.90/sq. ft. up to 60% of the total cost.

Please Note: Site-built homes

- with pre-existing wall insulation are ineligible for wall incentives.
- with any pre-existing floor insulation of R-18 or less are eligible for a \$0.12/ft² incentive. Homes which have never had floor insulation are eligible for a \$0.90/ft² incentive.
- must attain an R-49 or maximum possible R-value in ceilings to receive ceiling insulation incentive
- floor insulation incentives require a pre-job pest inspection report less than one year old.

**Pre-1992 Manufactured Home Insulation Incentives --
Ceiling, Exterior Roof & Floor Insulation: \$0.50/sq. ft.**

\$6/sq. ft. Window Replacement Incentive

You can reduce energy costs up to 20% by installing high-efficiency windows and doors in your home.

Please Note: this incentive is for replacing existing windows

- Original windows must be double-paned and metal framed *OR* single-paned with any frame type.
- Garden windows are excluded from this incentive.
- Windows must be in rooms with hardwired electrical heating.
- New windows may not be larger than originals.
- New windows must have an overall U-value of 0.30 or less.
- Single-paned or metal-framed sliding glass and/or French doors with U-values of 0.35 or less may be eligible.
